LIST OF CONTENTS

NUMBER 1

O. A. Pekau, Z. A. Zielinski and **L. Lin**	1	Displacement and natural frequencies of tall building structures by finite story method
F. Tin-Loi	15	Plastic limit analysis of plane frames and grids using GAMS
L. Bernspång, A. Samuelsson, M. Küssner and **P. Wriggers**	27	The consistent strain method in finite element plasticity
W. J. T. Daniel and **D. J. Mee**	35	Finite element modelling of a three-component force balance for hypersonic flows
N. Kumbasar and **T. Aksu**	49	A finite element formulation for moderately thick shells of general shape
C. Sridhar and **K. P. Rao**	59	Large deformation finite element analysis of laminated circular composite plates
A. M. A. Mansour	65	A study of a four-node rectangular element based on a displacement field that satisfies the equations of equilibrium
P. J. Deolasi and **P. K. Datta**	73	Parametric instability characteristics of rectangular plates subjected to localized edge loading (compression or tension)
B. C. Bell and **K. S. Surana**	83	*p*-Version least squares finite element formulation for two-dimensional incompressible Newtonian and non-Newtonian non-isothermal fluid flow
C. G. Karayannis	97	Torsional analysis of flanged concrete elements with tension softening
S. F. Ng and **X. Chen**	111	Analysis of arbitrary Mindlin plates or bridge decks by spline finite strip method
A. S. Gendy and **A. F. Saleeb**	119	Consistent mixed model for stability of stiffened panels with cut-outs
P. B. Thanedar and **C. C. Chamis**	131	Reliability considerations in composite laminate tailoring
T. Kumelj and **F. Kosel**	141	Elastic stability of thin annular plates made of rectilinearly orthotropic material
C. C. Fu and **Y. T. Hsu**	147	The development of an improved curvilinear thin-walled Vlasov element
D. G. Harlow and **T. J. Delph**	161	A computational probabilistic model for creep-damaging solids

A. Joseph Stanley and N. Ganesan — 167 Dynamic response of cantilever beams with discontinuity in thickness subjected to a point load

Technical Note

M. Isreb — 177 Constitutive electrical–structural engineering finite element modelling education relations

Announcement

181 Call for papers: the Third International Conference on Computational Structures Technology

I Software Survey Section

NUMBER 2

J. M. J. McDill and A. S. Oddy — 183 A nonconforming eight to 26-node hexahedron for three-dimensional thermal-elasto-plastic finite element analysis

D. Chakravorty, J. N. Bandyopadhyay and P. K. Sinha — 191 Free vibration analysis of point-supported laminated composite doubly curved shells—a finite element approach

Chang-New Chen — 199 A global secant relaxation (GSR) method-based predictor–corrector procedure for the iterative solution of finite element systems

S. A. Ramu and R. Ganesan — 207 Response and stability of a stochastic beam–column using stochastic FEM

H. H. Vaziri — 223 Analytical and numerical procedures for analysis of flow-induced cavitation in porous media

S. Arul Jayachandran and C. V. Vaidyanathan — 239 Post critical behaviour of biaxially compressed plates on elastic foundation

R. Baušys and R. Kačianauskas — 247 Macroelement approach to the analysis of cylindrical shells connected by taper-roller bearings

H. Adeli and G. Yu — 255 An integrated computing environment for solution of complex engineering problems using the object-oriented programming paradigm and a blackboard architecture

H. Adeli and J. Zhang — 267 Fully nonlinear analysis of composite girder cable-stayed bridges

K. T. Schuetze, P. S. Shiakolas, S. N. Muthukrishnan, R. V. Nambiar and K. L. Lawrence — 279 A study of adaptively remeshed finite element problems using higher order tetrahedra

S. H. Ju, J. J. Stone and **R. E. Rowlands**	289	A new symmetric contact element stiffness matrix for frictional contact problems
G. M. Cocchi	303	Elastic-static analysis of shear wall/slab-frame systems using the framework method
Guo-Qiang Li and **Zu-Yan Shen**	315	A unified matrix approach for nonlinear analysis of steel frames subjected to wind or earthquakes
M. N. Viladkar, J. Noorzaei and **P. N. Godbole**	327	Convenient forms of yield criteria in elasto-plastic analysis of geological materials
		Technical Notes
H. W. Ng	339	Dynamic analysis of AGR fuel assemblies
K. M. Tarhini and **G. R. Frederick**	351	Lateral load distribution in I-girder bridges
A. S. Gendy, S. N. Patnaik, D. A. Hopkins and **L. Berke**	355	Design optimization of a spacer structure for Space Station Freedom
		Announcement
	365	Call for papers: the Third International Conference on Computational Structures Technology
	I	Software Survey Section

NUMBER 3

A. Mukherjee and **J. M. Deshpande**	367	Application of artificial neural networks in structural design expert systems
T. A. Angelov and **Ts. P. Ivanov**	377	Finite–infinite element analysis of P- and SV-wave propagation in a semi-bounded medium
Y. L. Mo and **Rein-Yeang Yang**	383	Tool for dynamic analysis of concrete box tubes subjected to torsion
J. Jønsson, S. Krenk and **L. Damkilde**	395	Recursive substructuring of finite elements
X.-A. Kong and **Q. Wang**	405	A boundary element approach for rolling contact of viscoelastic bodies with friction
G. Prathap and **B. P. Naganarayana**	415	Consistent thermal stress evaluation in finite elements
A. J. Abbo and **S. W. Sloan**	427	A smooth hyperbolic approximation to the Mohr–Coulomb yield criterion
V. Leitão, M. H. Aliabadi and **D. P. Rooke**	443	Elastoplastic dual boundary elements: application to crack–face contact

C. J. Shih and **C. J. Chang**	455	Pareto optimization of alternative global criterion method for fuzzy structural design
H. M. Ali and **A. M. Abdel-Ghaffar**	461	Modeling the nonlinear seismic behavior of cable-stayed bridges with passive control bearings
M. Isreb	493	Finite elements life synthesis software design for the power industry
J. H. Lee and **C. P. Burger**	499	Finite element modeling of laser-generated Lamb waves
J. H. Lee	515	Advantages of strain-space formulation in computational plasticity
A. N. Danial and **J. F. Doyle**	521	Dynamic analysis of folded plate structures on a massively parallel computer
S. A. Choura and **A. S. Yigit**	531	Vibration confinement in flexible structures by distributed feedback
S. R. Bhate, U. N. Nayak and **A. V. Patki**	541	Deformation of composite beam using refined theory
		Technical Notes
D. S. Shridhar and **V. S. Chandrasekaran**	547	Use of transmitting boundary for loads having non-vanishing time average
N. Madhusudhana, B. P. Gautham and **N. Ganesan**	551	Buckling behaviour of uniformly and non-uniformly pretwisted beams
A. Kaveh and **G. R. Roosta**	557	Improved cycle bases of a graph for the force method of frame analysis
		Announcement
	561	Call for papers: the Third International Conference on Computational Structures Technology
	I	Software Survey Section

NUMBER 4

N. Manoharan and **S. P. Dasgupta**	563	Bearing capacity of surface footings by finite elements
M. V. Dharaneepathy, M. N. Keshava Rao and **A. R. Santhakumar**	587	Critical distance for blast-resistant design
P. C. Pandey and **S. V. Barai**	597	Multilayer perceptron in damage detection of bridge structures

Y. Chen	609	Prediction of lateral distribution of vehicular live loads on bridges with unequally spaced girders
A. Ghazavi and **F. Gordaninejad**	621	A comparison of the control of a flexible robot arm constructed from graphite/epoxy versus aluminum
G. Kress	633	Minimized computational effort for the thick-walled composite tube problem
R. P. Tetambe, S. M. Yunus, C. Rajakumar and **S. Saigal**	641	Examination of flux projection-type error estimators in nonlinear finite element analysis
Xingju Chen and **R. C. Batra**	655	Deep penetration of thick thermoviscoplastic targets by long rigid rods
T. K. Paul and **K. M. Rao**	671	Finite element stress analysis of laminated composite plates containing two circular holes under transverse loading
V. Sladek and **J. Sladek**	679	Plate bending problems using the nonsingular boundary element formulation and C^1-continuous elements
E. J. Barbero, R. Luciano and **E. Sacco**	689	Three-dimensional plate and contact/friction elements for laminated composite joints
Chongbin Zhao, T. P. Xu and **S. Valliappan**	705	Seismic response of concrete gravity dams including water–dam–sediment–foundation interaction
Long Yuqiu, Bu Xiaoming, Long Zhifei and **Xu Yin**	717	Generalized conforming plate bending elements using point and line compatibility conditions
M. Hoit and **K. Krishnamurthy**	725	A 14-point reduced integration scheme for solid elements
M. S. Park	731	Efficient large scaled profile matrix computation programs
K. H. Low	743	Displacement and frequency analyses of vibratory systems
O. Rand and **D. Givoli**	757	Reduction of the periodic thermoelastic deformation in truss-structures by design refinements and active loads
M. Ohga, T. Hara and **K. Kawaguchi**	767	Buckling mode shapes of thin-walled members
		Technical Notes
G. Venkateswara Rao, N. Rajasekhara Naidu and **K. Kanaka Raju**	775	Post-buckling behaviour of stepped circular plates under uniform compression
N. Maman and **C. Farhat**	779	Matching fluid and structure meshes for aeroelastic computations: a parallel approach

787 *Announcement*
Call for papers: the Third International Conference on Computational Structures Technology

I Software Survey Section

NUMBER 5

V. E. Verijenko, S. Adali and **V. G. Piskunov** 789 Finite elements based on shear and normal deformation theory for the analysis of laminated composite plates

Yong Liu 809 The viscoplastic mixed boundary element method for an axisymmetric body due to arbitrary distributed load

A. Y. T. Leung 819 The Galerkin element method for non-uniform frames

A. Pica, R. D. Wood, A. O. Adekunle and **J. Bonet** 835 Smoothing stress resultants in adaptive finite element shell analysis

K. De Langhe 851 Finite elements with boundary interpolation applied to the solid mechanics field problem

S. Rajendran 859 A FORTRAN program for computing the geometric properties of plane lamina and axi-symmetric bodies

A. Mukherjee and **B. Varughese** 865 A ply drop-off element for inclusion of drop-off in the global analysis of layered composite structures

O. L. Roufaeil 871 A new four-node quadrilateral plate bending element

H. A. Elkaranshawy and **M. A. Dokainish** 881 Corotational finite element analysis of planar flexible multibody systems

Datong Song, Suhuan Chen and **Zhipin Qiu** 891 Stochastic sensitivity analysis of eigenvalues and eigenvectors

M. Touratier and **J.-P. Faye** 897 On a refined model in structural mechanics: finite element approximation and edge effect analysis for axisymmetric shells

S. C. Hsieh and **T. Mura** 921 Design of a statically indeterminate truss with specified creep deflections

S. Pala and **G. Özmen** 925 Effective stiffness of coupling beams in structural walls

J. Murín 933 The formulation of a new non-linear stiffness matrix of a finite element

S. Y. Synn and **R. E. Fulton** 939 Practical strategy for concurrent substructure analysis

S. H. Nguyen 945 A fast numerical scheme for pivoted gas bearing studies

S. Rajasekaran and K. G. Venkatesan — 953 — A new contouring algorithm

Technical Notes

J. Kullaa and P. Klinge — 979 — A geometry based generation of a finite element model for stiffened shell structures

N. Ben Kahla — 989 — Influence of star mounts on guyed towers

L. T. Lee and J. C. Lu — 997 — Free vibration of cylindrical shells filled with liquid

Announcement

1003 — Call for papers: the Third International Conference on Computational Structures Technology

I — Software Survey Section

NUMBER 6

N. Manoharan and S. P. Dasgupta — 1005 — Consolidation analysis of elasto–plastic soil

Shen Pengcheng and He Peixiang — 1023 — Bending analysis of rectangular moderately thick plates using spline finite element method

M. L. Liu and C. W. S. To — 1031 — Hybrid strain based three node flat triangular shell elements—I. Nonlinear theory and incremental formulation

C. W. S. To and M. L. Liu — 1057 — Hybrid strain based three node flat triangular shell elements—II. Numerical investigation of nonlinear problems

D. N. Venkatesh and U. Shrinivasa — 1077 — Generation of an eight node brick element using Papcovitch–Neuber functions

Lei Xiao-Yan — 1085 — A new BEM approach for Reissner's plate bending

Kuo Mo Hsiao and Rong Tser Yang — 1091 — A co-rotational formulation for nonlinear dynamic analysis of curved Euler beam

Qian Ling-Xi — 1099 — An order-reduction method for extraction of eigenvalues of dynamic systems

V. Ramamurti — 1105 — Comparison of semi analytic and cyclic symmetric approaches

A. Cipollina, A. López-Inojosa and J. Flórez-López — 1113 — A simplified damage mechanics approach to nonlinear analysis of frames

Yuan-yao Qian and G. Dhatt — 1127 — An accelerated subspace method for generalized eigenproblems

A. Y. T. Leung and **S. G. Mao** 1135 Symplectic integration of an accurate beam finite element in non-linear vibration

B. B. Budkowska and **C. Szymczak** 1149 The analysis of an axially loaded pile with account for its varying length

P. M. A. Slaats, J. de Jongh and **A. A. H. J. Sauren** 1155 Model reduction tools for nonlinear structural dynamics

Technical Notes

D. Sengupta 1173 Performance study of a simple finite element in the analysis of skew rhombic plates

C. Sridhar and **K. P. Rao** 1183 Estimation of low-velocity impact damage in laminated composite circular plates using nonlinear finite element analysis

H. Lima Soriano and **S. de Souza Lima** 1191 On plotting of section force components diagrams for framed structures

N. Ben Kahla 1197 Dynamics of a single guy cable

Announcement

1213 Call for papers: the Third International Conference on Computational Structures Technology

I Software Survey Section
